For 12 years, Princeton Blue has been a trusted Appian solution development partner and has delivered 271 Appian applications for our clients during that time.

These solutions innovate and modernize our clients' most strategic business processes while simplifying and enhancing their customer experience. Our deep understanding of modern automation technologies (Low-code, BPM, Dynamic Case Management and RPA) allows us to deliver fully customized and integrated automation solutions in just 10-15 weeks.

We follow the Agile methodology for designing and delivering Appian solutions while adhering to Appian's best practices and leveraging the latest features and functionality in the most current release of Appian. What sets us apart is our extensive experience on the Appian platform, pre-built solutions from our Innovation Lab, numerous client references, our implementation methodology, and best practices.

Clients benefit from our team of highly experienced and certified Appian consultants located in the US, Mumbai and Pune, India.
Robotic Process Automation (RPA)

Robotic Process Automation (RPA) helps you design, build, train, operate and manage software robots that automate repetitive and predictable human tasks, e.g., read a PDF invoice, enter the invoice into an Excel sheet, etc. RPA also helps you integrate with applications that do not provide APIs for integration.

Appian RPA

In 2020, Appian acquired the Jidoka RPA platform, the highest-rated RPA software on Gartner Peer Insights. This makes Appian a full-stack automation platform with best-in-class technologies for BPM, Low-code, Case Management, RPA and AI. If the robot encounters an error, Appian’s case management and workflow capability can loop in a human for remediation.

Certified Blue Prism Partner

Princeton Blue has partnered with Blue Prism to bring the leading Robotic Process Automation (RPA) platform and its capabilities to our clients. Our certified Blue Prism consultants help you to accelerate your Low-code Process Automation journey. To see a demo that demonstrates the capabilities of Appian BPM, Low-code and RPA and see how they work together to provide a more end-to-end automation solution, please contact us.

UiPath and Automation Anywhere

If you have a different RPA platform in mind, we also have experience in UiPath and Automation Anywhere. Let us know how we can support you with your RPA requirements.
Driving Intelligent Automation

The Princeton Blue Innovation Lab

The Princeton Blue Innovation Lab is a team of creative consultants and expert technologists from our US and India offices. Together they ideate and develop solutions for common automation challenges and build Proof of Concepts for clients.

Build Proof of Concepts

Use our Innovation Lab to build a Proof of Concept before you invest in Appian. This is a very popular service and is used by many of our clients.

Industry Solutions

Take advantage of our Pre-built Solutions to kick-start your automation journey using Low-code, BPM and RPA. Use our Pre-built Solutions to:

- Understand what's possible for automating your processes with the Appian platform.
- Demonstrate a working solution to internal stakeholders before greenlighting your project.
- Start with a foundation for your project. Customize and enhance it further to deliver the best results in weeks.

Drug Safety

Streamline the process of effectively analyzing, prioritizing and responding to safety signals with an innovative Low-code solutions.

- BPM
- Low-code

Labeling

Leverage Low-code, BPM and RPA to automate the entire workflow and orchestrate collaboration with various stakeholders to process label changes.

- BPM
- Low-code
- RPA

User Access Management

Grant, revoke and track access to various clinical systems, services, and resources to streamline clinical trials.

- BPM
- Low-code
- RPA

Dynamic Emergency Response

Streamline the process of effectively responding and treating an emergency, powered by BPM and Low-code.

- BPM
- Low-code

Study Start-up

Automate and organize the clinical study start-up process across the globe with BPM, Low-code and case management.

- BPM
- Low-code

Automated Customer Service

Take customer service automation to the next level using BPM, case management, Low-code, RPA, and AI.

- BPM
- Low-code
- RPA
- AI
